DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group II, claims 1-18 and 30-32, in the reply filed on 10/25/2004 is acknowledged. The traversal is on the ground(s) that the embodiments delineated by the examiner are not patentably distinct and therefore constitute a single invention concept. This is not found persuasive because the inventions are patentably distinct, as set forth in the restriction requirement.

The requirement is still deemed proper, and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-18 and 30-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The disclosure does not provide the ordinary skill artisan with a reasonable expectation of success in creating or carrying out the claimed subject matter, since it does not provide any guidance as to how such one interconnect opening is created through layers of semiconductor material over the substrate. Without this disclosure, one of ordinary skill cannot practice the invention without undue experimentation because of the number of operational parameters in the process.

Art Unit: 2811

Applicant is requested to point out exactly wherein the application that provides support for the at least one interconnect opening is created through layers of semiconductor material. In fact, page 13, lines 6-7 of the specification disclose "opening 25, created through the layers of dielectric and etch stop material". These layers are not semiconductor material.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 32 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 32 is incomplete and defective since it depends on a non-elected claim 19.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References A and B are being cited since these show cooper interconnects.
